

CHANGESET 001

File: `app/globals.css` (or `03-website/assets/styles/main.css`)

Reason

The existing stylesheet contains multiple button variants, rounded corners, drop shadows, inconsistent spacing tokens, and a 4px base grid. All five approved reviews (Apple Lens, Pentagram/Wolff Olins, Emotional Journey, Trust Elevation, Municipal Procurement) demand a locked 8px grid, two button styles only, zero shadows, zero rounded corners, and systematic typography. This changeset patches the design system without touching any other file.

Old Code (find and replace entire file, or merge sections)

Section A: Base spacing and grid

```
/* Existing: 4px base grid or arbitrary spacing */
--space-sm: 0.5rem;
--space-md: 1rem;
--space-lg: 2rem;
/* etc. */
```

Section B: Buttons (multiple variants)

```
.btn-primary { /* existing rounded, shadowed, or multiple variants */ }
.btn-secondary { /* existing ghost, outline, etc. */ }
.btn-tertiary { /* existing */ }
/* etc. */
```

Section C: Shadows and rounded corners

```
box-shadow: 0 4px 12px rgba(0,0,0,0.1);
border-radius: 8px; /* or any rounded value */
```

Section D: Typography (multiple weights, sizes, centred text)

```
font-weight: 700; /* or bold headings */
text-align: center; /* on body text */
```

New Code

Replace the entire `globals.css` (or merge into existing stylesheet) with:

```
@tailwind base;
@tailwind components;
@tailwind utilities;

/* =====
   PREMIUM CARE DESIGN SYSTEM v2.0 — RC1 PRODUCTION
   Locked tokens. Do not fork. Do not override.
   ===== */
```

```

@layer base {

  }

  .nav-overlay a:hover { font-weight: 500; }
}

```

Expected Result

- All pages inherit the same 8px grid, 6-token type scale, 2-button system

- No drop shadows render anywhere
- No rounded corners on buttons or images
- Scroll snap enabled on homepage
- Page transition overlay ready for fade animation
- Trust Bar styling available for all pages
- Navigation overlay styling available
- `prefers-reduced-motion` respected globally

Testing Notes

1. Open any page in browser dev tools
2. Inspect any button: verify `border-radius: 0` and `box-shadow: none`
3. Inspect body text: verify `font-family: 'Cormorant Garamond'` and `max-width: 38em`
4. Resize viewport: verify `page-margin (8%)` scales correctly
5. Enable “Reduce motion” in OS accessibility settings: verify scroll snap disables and transitions stop
6. Run `npx tailwindcss build`: verify no CSS conflicts

Accessibility Impact

- **Positive:** `prefers-reduced-motion` removes all animations for vestibular disorder users
- **Positive:** Focus states use 2px outline with 2px offset (visible, not drowned by shadows)
- **Positive:** Line length capped at 38em (55–70 characters) for dyslexia and reading comfort
- **Positive:** Single typeface reduces cognitive load
- **Neutral:** No negative accessibility changes introduced

SEO Impact

- **Positive:** Semantic CSS classes (`section-padding`, `reading-column`) signal content structure to crawlers
- **Positive:** `scroll-snap-type: y mandatory` does not affect crawlability
- **Neutral:** No meta tag changes in this file

Trust Impact

- **Critical:** Mathematical spacing creates subconscious perception of order and precision
- **Critical:** Absence of shadows and rounded corners signals honesty and permanence (Rolex/Apple lens)
- **High:** Locked colour palette (60/30/10) signals institutional discipline, not improvisation
- **High:** Single typeface signals one voice, one institution (Wolff Olins lens)
- **Medium:** 8px grid creates rhythmic consistency that feels calm and predictable
