

CHANGESSET 002

File: `app/layout.tsx` (or `03-website/build/layout.py` equivalent root template)

Reason

The existing root layout likely lacks the global components required by the approved reviews: Trust Bar (persistent on every page), Wordmark (fixed, 16px, fade on scroll), Navigation (sheet overlay, not bar), and Page Transition (fade to Ivory). This changeset adds these four components to the root layout without removing any existing meta tags, analytics, or other global infrastructure.

Old Code

```
import type { Metadata } from "next";
import { /* existing fonts */ } from "next/font/google";
import "../globals.css";

export const metadata: Metadata = {
  title: "Premium Care",
  description: "Omsorg • Tryghed • Hver Dag",
};

export default function RootLayout({
  children,
}: {
  children: React.ReactNode;
}) {
  return (
    <html lang="da">
      <body>
        <main>{children}</main>
      </body>
    </html>
  );
}
```

New Code

```
import type { Metadata } from "next";
import { Cormorant_Garamond, Cinzel } from "next/font/google";
import "../globals.css";
import { TrustBar } from "@/components/TrustBar";
import { PageTransition } from "@/components/PageTransition";
import { Wordmark } from "@/components/Wordmark";
import { Navigation } from "@/components/Navigation";

const cormorant = Cormorant_Garamond({
  subsets: ["latin"],
  weight: ["400", "500"],
```

```

    variable: "--font-body",
    display: "swap",
  });

const cinzel = Cinzel({
  subsets: ["latin"],
  weight: ["400"],
  variable: "--font-display",
  display: "swap",
});

export const metadata: Metadata = {
  title: "Premium Care",
  description: "Omsorg • Tryghed • Hver Dag",
};

export default function RootLayout({
  children,
}: {
  children: React.ReactNode;
}) {
  return (
    <html lang="da" className={` ${cormorant.variable} ${cinzel.variable}`}>
      <body>
        <PageTransition />
        <Wordmark />
        <Navigation />
        <main>{children}</main>
        <TrustBar />
      </body>
    </html>
  );
}

```

Expected Result

- Every page loads with Cormorant Garamond (body) and Cinzel (display) via CSS variables
- Trust Bar renders at the bottom of every page
- Wordmark renders fixed top-left on every page
- Navigation “Menu” trigger renders fixed bottom-left on every page
- Page transition overlay renders on every page route change
- Existing metadata, children, and any other global elements preserved

Testing Notes

1. Load any page: verify Trust Bar visible at bottom (32px, navy, gold text)
2. Verify Wordmark “Premium Care” in Cinzel, 16px, top-left
3. Scroll down 100px: verify Wordmark fades out
4. Click “Menu” bottom-left: verify full-screen overlay appears with 5 links

5. Navigate to another page: verify fade-to-Ivory transition occurs
6. Check Network tab: verify both fonts load from Google Fonts CDN
7. Run next build: verify no import errors for `@/components/*`

Accessibility Impact

- **Positive:** `lang="da"` preserved for screen reader pronunciation
- **Positive:** `display: "swap"` prevents invisible text during font load (FOUT acceptable, FOIT prevented)
- **Positive:** Trust Bar provides persistent credential information for all users
- **Neutral:** No negative accessibility changes

SEO Impact

- **Positive:** Google Fonts with `display: swap` improve Core Web Vitals (LCP)
- **Positive:** `lang="da"` signals Danish content to search engines
- **Neutral:** No meta tag changes

Trust Impact

- **Critical:** Trust Bar on every page means municipalities never have to search for credentials
- **Critical:** Wordmark at 16px signals confidence (does not shout); fade on scroll signals content-first design
- **High:** Navigation as sheet (not bar) signals hospitality, not corporate bureaucracy (Aman lens)
- **Medium:** Page fade transitions signal calm, not jarring navigation (Apple lens)
