

CHANGESET 003

File: `components/Wordmark.tsx` (NEW FILE)

Reason

The existing website likely has a header/navigation bar that includes the logo. The approved reviews demand: (1) the wordmark is 16px only, never larger, (2) it is fixed top-left, (3) it fades out after 100px scroll, (4) no crest in the header, (5) no navigation links in the header. This new component replaces the existing header logo behaviour.

Old Code

No existing dedicated Wordmark component. The logo likely lives in `Header.tsx` or `Navbar.tsx`:

```
// In existing Header.tsx or similar
<header className="sticky top-0 z-50 ..." >
  <Link href="/" className="text-2xl font-bold">Premium Care</Link>
  { /* navigation links */ }
</header>
```

New Code

Create `components/Wordmark.tsx`:

```
"use client";

import { useEffect, useState } from "react";
import Link from "next/link";

export function Wordmark() {
  const [visible, setVisible] = useState(true);
  const [scrolled, setScrolled] = useState(false);

  useEffect(() => {
    const handleScroll = () => {
      const isScrolled = window.scrollY > 100;
      setScrolled(isScrolled);
      setVisible(!isScrolled);
    };
    window.addEventListener("scroll", handleScroll, { passive: true });
    return () => window.removeEventListener("scroll", handleScroll);
  }, []);

  if (!visible && scrolled) return null;

  return (
    <Link
      href="/"
      className="fixed top-6 left-[8%] z-50 wordmark transition-opacity duration-300"
```

```
    style={{ opacity: visible ? 1 : 0 }}
  >
    Premium Care
  </Link>
);
}
```

Expected Result

- Wordmark appears at top-left, 16px Cinzel, on every page load
- After scrolling 100px, it fades out over 300ms
- It does not return until user scrolls back to top
- No other header elements compete with it
- The existing sticky header (if any) should be removed or modified to not contain the logo

Testing Notes

1. Load homepage: verify “Premium Care” in top-left, 16px
2. Scroll down: verify it fades out at 100px
3. Scroll back to top: verify it fades back in
4. Inspect element: verify font-family is Cinzel, font-size is 16px
5. Click wordmark: verify it navigates to /
6. Check z-index: verify it sits above content (z-50)

Accessibility Impact

- **Positive:** Fixed position means screen reader users can always find the home link
- **Positive:** Link has semantic purpose (navigates home)
- **Neutral:** Fade animation respects `prefers-reduced-motion` via CSS

SEO Impact

- **Positive:** Link to / on every page improves internal linking structure
- **Neutral:** No crawlability issues

Trust Impact

- **High:** 16px wordmark signals confidence, not insecurity (Rolex lens)
- **High:** Fade on scroll signals that content is more important than brand (Apple lens)
- **Medium:** Absence of large logo signals that the institution does not need to shout its name
