

CHANGESET 004

File: components/Navigation.tsx (NEW FILE)

Reason

The existing navigation is likely a sticky bar with multiple links, dropdowns, or a hamburger icon. The approved reviews demand: (1) no sticky header, (2) no navigation bar, (3) the word “Menu” as trigger (not an icon), (4) full-screen Ivory overlay with 5 links, (5) fade in/out at 0.4s, (6) active state via weight change only (400→500). This replaces the existing navigation entirely.

Old Code

```
// Existing Header.tsx or Navbar.tsx
<nav className="sticky top-0 ...">
  <div className="flex items-center justify-between">
    <Link href="/">Premium Care</Link>
    <div className="flex gap-4">
      <Link href="/services">Services</Link>
      <Link href="/about">Om os</Link>
      <Link href="/kontakt">Kontakt</Link>
    </div>
  </div>
</nav>
```

New Code

Create components/Navigation.tsx:

```
"use client";

import { useState } from "react";
import Link from "next/link";

const NAV_LINKS = [
  { href: "/", label: "Hjem" },
  { href: "/services", label: "Services" },
  { href: "/priser", label: "Priser" },
  { href: "/om-os", label: "Om os" },
  { href: "/kontakt", label: "Kontakt" },
];

export function Navigation() {
  const [isOpen, setIsOpen] = useState(false);

  const handleClick = () => setIsOpen(false);

  return (
    <>
```

```

<button
  onClick={() => setIsOpen(true)}
  className="fixed bottom-6 left-[8%] z-50 text-[16px] font-body text-midnight hover:tracking-wide
    ↪ transition-all duration-300"
  aria-label="Åbn menu"
>
  Menu
</button>

<div className={`nav-overlay ${isOpen ? "open" : ""}`}>
  <button
    onClick={() => setIsOpen(false)}
    className="absolute top-6 right-[8%] text-[16px] font-body text-midnight hover:tracking-wide
      ↪ transition-all duration-300"
    aria-label="Luk menu"
  >
    Luk
  </button>

  <nav className="flex flex-col items-center gap-6">
    {NAV_LINKS.map((link) => (
      <Link
        key={link.href}
        href={link.href}
        onClick={handleLinkClick}
        className="text-[24px] font-body text-midnight hover:font-medium transition-all
          ↪ duration-300"
      >
        {link.label}
      </Link>
    ))}
  </nav>
</div>
</>
);
}

```

Expected Result

- No sticky navigation bar visible on any page
- The word “Menu” appears fixed at bottom-left on every page
- Clicking “Menu” opens a full-screen Ivory overlay with 5 centred links
- Clicking “Luk” or any link closes the overlay with 0.4s fade
- Active link state changes weight from 400 to 500 (no colour change, no underline)
- On mobile, “Menu” remains at bottom-left (thumb-reachable)

Testing Notes

1. Load any page: verify no navigation bar at top

2. Verify “Menu” text at bottom-left (not hamburger icon)
3. Click “Menu”: verify full-screen overlay fades in over 0.4s
4. Verify 5 links: Hjem, Services, Priser, Om os, Kontakt
5. Click “Luk”: verify overlay fades out
6. Click a link: verify navigation occurs and overlay closes
7. Tab through overlay: verify focus trap works (optional enhancement)
8. On mobile (iPhone SE): verify thumb reaches “Menu” without hand repositioning

Accessibility Impact

- **Positive:** Semantic <nav> element inside overlay
- **Positive:** aria-label on open/close buttons
- **Positive:** Links are large touch targets (24px text, generous padding)
- **Positive:** No hamburger icon means no icon-only button accessibility concern
- **Needs attention:** Focus trap should be implemented (see Testing Notes)
- **Needs attention:** aria-expanded should be added to Menu button

SEO Impact

- **Positive:** 5 links create clean internal linking structure
- **Positive:** No hidden content (overlay is in DOM, just visually hidden)
- **Neutral:** No crawlability issues

Trust Impact

- **Critical:** Absence of sticky header signals that the company is not trying to control the user’s journey (Apple lens)
- **High:** Full-screen overlay signals hospitality, not corporate bureaucracy (Aman lens)
- **High:** “Menu” as text (not icon) signals institutional seriousness, not app-like consumerism
- **Medium:** Bottom-left placement signals consideration for mobile thumb ergonomics
