

CHANGESET 006

File: components/PageTransition.tsx (NEW FILE)

Reason

No existing page transition component. The Apple Lens review demands fade-to-Ivory transitions between pages (0.4s) instead of instant loads or sliding animations. This creates a calm, breath-like navigation experience.

Old Code

No existing page transition. Next.js routes change instantly by default.

New Code

Create components/PageTransition.tsx:

```
"use client";

import { useEffect, useState } from "react";
import { usePathname } from "next/navigation";

export function PageTransition() {
  const pathname = usePathname();
  const [isTransitioning, setIsTransitioning] = useState(false);

  useEffect(() => {
    setIsTransitioning(true);
    const timer = setTimeout(() => setIsTransitioning(false), 400);
    return () => clearTimeout(timer);
  }, [pathname]);

  return (
    <div
      className={`page-transition-overlay ${isTransitioning ? "active" : ""}`}
      aria-hidden="true"
    />
  );
}
```

Note: The CSS for `.page-transition-overlay` and `.active` is already in `globals.css` (CHANGESET 001). The component is already placed in `layout.tsx` (CHANGESET 002).

Expected Result

- On every route change, the current page fades to Ivory over 0.4s
- Then the new page fades in from Ivory over 0.4s

- No sliding, no pushing, no instant teleportation
- Overlay is `aria-hidden="true"` (decorative, not interactive)

Testing Notes

1. Navigate from `/` to `/services`: verify fade-to-Ivory occurs
2. Navigate back: verify same fade behaviour
3. Rapid navigation (click back/forward quickly): verify no visual glitches
4. Check that overlay does not block clicks after transition completes
5. Enable “Reduce motion”: verify transition disables (CSS handles this)

Accessibility Impact

- **Positive:** `aria-hidden="true"` prevents screen readers from announcing decorative overlay
- **Positive:** `prefers-reduced-motion` disables animation for vestibular disorder users
- **Neutral:** No negative accessibility impact

SEO Impact

- **Neutral:** No impact on crawlability or rankings

Trust Impact

- **High:** Fade transition signals calm and deliberation, not rush (Apple lens)
- **Medium:** The pause between pages creates a moment of reflection, reducing anxiety
- **Low:** Consistent transition across all pages signals systematic thinking
